

How we can help you with medicines management and optimisation

Our medicines management and optimisation (MMO) service

- Our health care systems knowledge means we can solve medicines issues between organisations and deliver at scale across ICSs and STPs. Our work spans the NHS and social care use of medicines
- More widely we deliver for NHS England nationally and across regional areas
- We use a hub and spoke model - an at-scale approach with staff locally embedded (or remote working) with clients where appropriate
- More than 100 staff – many are professionally registered pharmacists or pharmacy technicians
- Expertise from a wide range of departments across MLCSU helps deliver best outputs e.g. Business Intelligence supports our data services, Communications & Engagement supports national surveys, Strategy Unit supports academic and evidence work
- We develop and share leading-edge MMO tools, such as our Medicines Safety Assurance Tool™ and our Validate™ tool for high-cost drugs

Providing clinical medicines services

Our clinical services support medicines optimisation in GP practices and care homes; improving patient safety, reducing waste, reducing admissions and freeing-up clinician time.

Examples include:

- medicines optimisation clinics
- care homes structured medicines review

The team's expertise gives us confidence we're making sound policy decisions on medicines.

Dr Tony Naughton
Fylde and Wyre CCG
