

How we can provide help in maximising productivity

Office 365 deployments

We offer both structured and bespoke services:

- Office 365 deployments across your organisation
- multi-organisation solutions for partnerships and strategic alliances
- intranets and extranets for desktop and mobile devices
- data migrations from legacy file servers to The Cloud
- trial tenants for evaluation.

Customised solutions

Our developers and consultants can deliver customised solutions using Office 365 technology, including:

- flexible and collaborative team working (SharePoint Online, Teams)
- collaboration workspaces and group chat including:
 - o team sites
 - o communications sites
 - o project sites
 - o document libraries
- personal document storage, retrieval and synchronisation (OneDrive for Business)

- advanced audio and video communications (Teams)
- team task management (Planner)
- personal task management and prioritisation (To-Do)
- process and task automation (Flow and SharePoint Online)
- interactive data visualisations (Power BI)
- interactive and dynamic presentations and documents (Sway)
- enterprise video streaming (Stream)
- custom apps (SharePoint Online)

Task-driven support

From simple workflows to large custom solutions, we work with you to create Office 365 experiences that are dynamic, functional and meet your exact requirements, including:

- digital workflows and business processes
- document management
- risk and issues management
- capacity management
- event, room and resource booking
- complaints case management
- staff awards nominations and schemes.

Bespoke application solutions

- We develop, deliver and support a wide range of standalone, integrated and transactional solutions:
 - content management and portal solutions using the latest Umbraco Content Management System across a range of business lines including:
 - o libraries & Knowledge Management
 - o educational systems
 - o observatory / Health insight portals
 - in C# and VB.NET, with Microsoft SQL Server.
 - using Azure DevOps to manage our source code and continuous deployment pipelines to push out the latest new features to our customers.
- We provide www and HSCN hosting. Our www hosting is of the highest standard available and is fully compliant with NHS requirements.
- We're trained and certified in ITIL (IT Infrastructure Library) Service Management, PRINCE2 and developer specific processes.

The MLCSU team bring lots of great ideas and innovative thinking and have worked well with us front line clinicians in applying that to our real-world problems.

Prof. George Tadros

Clinical Director, Birmingham and Solihull Mental Health NHS Foundation Trust

The FindMeALocum app we developed is helping practice managers to find high quality locums quickly, and also helping GPs to work more flexibly. Within the first eight months almost **100 GPs** registered with the app, and approximately **1,400 vacancies** were filled.
