A care system support organisation

NHS

How we can help you with medical terminology and clinical coding training

Accurate and consistent clinical documentation is essential for patient safety, regulatory compliance, and efficient healthcare services.

NHS Midlands and Lancashire (NHS ML) provides medical terminology and clinical coding training, supporting staff in developing the knowledge and skills needed for effective data management and improved accuracy in medical records.

Understanding medical terminology and coding frameworks is crucial for anyone handling clinical data.

Medical terminology training introduces non-clinical staff to the structure of medical language, including prefixes, suffixes, and body systems, helping to enhance data entry and patient communication.

Clinical coding training is designed for clinical system users working with Systematised Nomenclature of Medicine – Clinical Terms (SNOMED CT), EMIS, and SystmOne, covering coding principles, search techniques, and best practices to ensure compliance with NHS data standards.

Why choose NHS ML

Expert-led, NHS-focused training

Training is delivered by specialists in clinical coding, data quality, and SNOMED CT, ensuring alignment with NHS frameworks and best practices.

Practical learning with real-world application

Sessions include case-based exercises, interactive assessments, and system demonstrations, enabling participants to apply their learning directly to their roles.

Supporting compliance and data accuracy

Courses are designed to support data quality improvements, reduce errors in medical records, and enhance adherence to NHS standards.

Our expertise

NHS ML has extensive experience in clinical data management and coding. Our trainers are industry professionals with expertise in healthcare data quality, NHS coding standards, and compliance frameworks.

- Specialists in SNOMED CT, EMIS, and SystmOne coding frameworks
- Experts in Data Quality Improvement and NHS Digital compliance
- Experience in training primary care, secondary care, and non-clinical staff
- Practical knowledge of NHS England (NHSE) digital standards and reporting
- Strong background in error reduction, documentation accuracy, and healthcare IT

We understand the challenges faced by healthcare organisations and provide structured, effective training solutions that improve both data accuracy and operational efficiency.

Our training

Our training sessions are delivered online by subject matter experts with experience in clinical coding, data quality, and NHS compliance. Sessions incorporate interactive activities, live demonstrations, and assessments, ensuring that staff actively engage with the content and develop practical skills.

Participants will gain hands-on experience in applying medical terminology and clinical coding principles through real-world scenarios, case studies, and structured exercises. Live demonstrations provide clear, step-by-step guidance, while assessments reinforce learning and help build confidence in applying knowledge accurately.

Key features of our training:

- **Comprehensive courses** covering core terminology and coding principles
- **Interactive learning** with case studies and hands-on exercises
- **Structured content** tailored for different skill levels
- **Customisable training** to fit organisational needs
- **Flexible online delivery** to support varied work schedules

How you'll benefit

Improved accuracy and consistency
Gain a strong understanding of medical terminology and coding principles to reduce errors.

Ensure compliance with NHS digital standards
Stay aligned with SNOMED CT, NHS data requirements, and clinical coding frameworks.

Enhance efficiency in patient record management
Streamline data entry processes and improve overall record-keeping accuracy.

Flexible online learning options
Access structured, self-paced, and interactive training designed for busy professionals.
