

How we can help you with digital technology transformation

In today's fast-moving digital landscape, healthcare organisations must keep pace with technological advancements to remain efficient, secure, and cost-effective. Whether you're facing project delays, struggling with resource gaps, or trying to navigate complex IT transformations, NHS Midlands and Lancashire (NHS ML) is here to help.

Challenges we solve

Do any of these challenges sound familiar?

- Lack of skilled programme and project managers with technical IT expertise
- Rising costs and delayed delivery of technology projects
- Over-reliance on contractors, leading to inconsistency and high costs
- Project managers without an IT background, struggling with technical complexities
- Repeated failures in IT project execution
- Poor business intelligence and reporting, limiting informed decision-making
- Challenges in writing compelling business cases for IT programmes

With NHS ML, you gain access to the right skills, tools, and strategies to overcome these barriers.

Why choose NHS ML?

At NHS ML, we bring together deep expertise in digital transformation and IT project management, tailored specifically for the healthcare sector. Our approach is designed to optimise efficiency, enhance security, and drive success.

Specialist expertise and proven track record

We have a wealth of experience managing complex digital programmes, ensuring compliance with national healthcare IT regulations while minimising risk.

Tailored, cost-effective solutions

From fully managed IT services to specialist consultancy, we provide flexible, scalable support that meets your specific needs - without recruitment or onboarding costs.

Comprehensive project support

Our experts ensure seamless end-to-end project execution, with embedded Programme Management Office (PMO) tools, business intelligence insights, and governance frameworks for complete visibility and control.

Focus on long-term success

We don't just manage projects - we empower your teams, transferring knowledge and building internal capabilities to support sustainable IT transformation.

Case study:

NHS England Learning Disability & Autism (LDA) service transformation

During the COVID-19 pandemic, NHS England urgently needed to transition its Learning Disability & Autism (LDA) service to a cloud-based solution. The existing IT infrastructure couldn't support remote working, posing operational risks. NHS ML's Digital Transformation team was tasked with delivering a rapid, fully managed IT service.

We swiftly deployed a secure cloud-based infrastructure, providing staff with Microsoft Windows devices, essential applications, and remote IT support. A dedicated service desk minimised downtime, and targeted training ensured staff could navigate the new system efficiently.

Completed within a tight timeframe, the project enabled seamless remote operations while enhancing security, efficiency, and agility. This case highlights MLCSU's expertise in delivering complex IT transformations with speed, precision, and measurable impact.

How you'll benefit

Predictable and reduced costs

Flexible pricing with discounted rates for long-term engagements.

Technical IT project managers

Skilled experts in cloud deployments, infrastructure, and IT service management.

Risk reduction

Structured change management processes prevent common IT project failures.

Regulatory compliance:

We ensure alignment with national digital healthcare standards.

Knowledge transfer

Our specialists work alongside your teams, upskilling staff for long-term success.

Faster, more reliable delivery

Proven methodologies and project governance to meet deadlines and avoid overruns.
